Rationale

The portfolio website uses a consistent header, navigation menu, content sections, and footer across its pages. The mobile layout arranges the navigation links and content vertically to improve readability on narrower screens. The desktop layout uses the wider screen by displaying the navigation links horizontally and placing suitable content sections side by side. The website uses a consistent colour palette of dark charcoal, black, pink, and white, with Arial as the main font family.

These design choices helped maintain a clear, organised, and consistent appearance throughout the portfolio.
